

## Quantitative BioImaging 2017

Texas A&M University, College Station, TX, USA

January 5 – 7, 2017

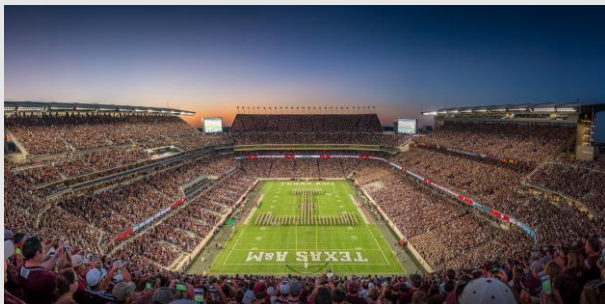

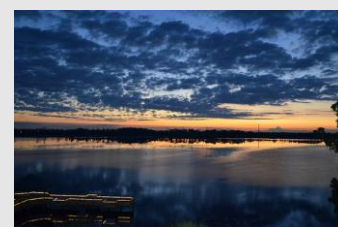

### Conference Announcement

The **Quantitative BioImaging (QBI) 2017** will be the **5th international conference** in this series with focus on the quantitative analysis of bioimaging data in an interdisciplinary manner. It will bring together researchers from engineering, (bio)physics, biology and chemistry who work on quantitative aspects of microscopy. While the last conference had an emphasis on single molecule microscopy, for this conference, we also welcome contributions from other areas of microscopy. We are planning extensive overview lectures on a number of important areas and hope to be dealing with these topics in a more substantial way than what can be typically done. A major goal of the organization of the conference is to allow for significant interactions amongst the participants.

Past QBI conferences were held in Albuquerque, NM, USA; Paris, France; and Delft, The Netherlands. For more information regarding the past conferences, including the abstract books, etc., please visit <http://www.quantitativebioimaging.com/pastconferences/>
